Buffer system

MESOHYDRAL PEPTIDE

This product for biorevitalization is unique due to the combination of high and low molecular weight hyaluronic acid. Besides, the product is enriched with a peptide complex which induces the synthesis of skin own collagen and hyaluronic acid, increases skin density, reduces the depth of wrinkles and provides deep hydration and lifting effects.

Indications:

- biorestructuring
- deep and lasting hydration
- aging prevention
- improvement of elasticity and firmness of the skin
- treatment of age-related changes
- restoration of healthy skin shine

Application protocol:

3-4 sessions at 14 day intervals (2-3 courses a year depending on the skin condition)

Packaging:

pre-filled syringe of 2,0 ml

Concentration of HA*:
18 mg/ml (1,8%)

Molecular weight of HA*:
1800 kDa

Vitamins: C, B5

Antioxidants

Buffer system

NUCLEOSPIRE REVITALIZING COMPLEX A

New generation biorevitalizant, its exclusive formula combines optimal concentrations of HA and essential antioxidants. The product gives the skin a fresh and radiant look, reduces hyperpigmentation and couperosis signs on the skin.

Indications:

- biorevitalization
- hyperpigmentation treatment
- reducing couperosis marks
- preparation for and rehabilitation after aggressive aesthetic procedures (UV, peels, surgery, etc.)
- prevention of skin aging
- improving the color of "smokers' skin"

Application protocol:

2-4 sessions, 1 session per 2 weeks

Packaging:

pre-filled syringe of 1,3 or 2,0 ml

*Hyaluronic Acid

Concentration of HA:
18 mg/ml (1,8%)

Molecular weight of HA:
1800 kDa

HYDRO LINE EXTRA REVITALIZING COMPLEX B

This biorevitalizant is enriched with a balanced complex of vitamins, amino acids and key antioxidants. The product restores cellular metabolism and hydro reserve, improves trophic properties of the skin, induces neocollagenesis, provides a prominent lifting effect.

Indications:

- biorevitalization
- reducing the depth of wrinkles; visible lifting effect
- improvement of elasticity and complexion of the skin
- skin aging prevention and complex treatment
- preparation for and rehabilitation after aggressive aesthetic procedures (UV, peels, surgery, etc.)

Application protocol:

4 sessions, 1 session per 2 weeks

Packaging:

pre-filled syringe of 1,3 or 2,0 ml

Sodium deoxyribonucleate
20,0 mg/ml (2,0%)
(fragments of DNA from salmon milt with molecular weight less than 450 kDa)
Buffer system

NUCLEOSPIRE DNA-RNA 2%

Polynucleotides-based bioreparant which provides dermal rejuvenation and revitalization, strong anti-aging effect. This product normalizes the cycle of cell reproduction, protects DNA of skin cells from external damage and enhances the regeneration properties of the skin.

Indications:

- prevention and complex treatment of skin aging
- restoration of skin firmness in delicate areas (periorbital area, neck, décolleté)
- preparation for and rehabilitation after aggressive aesthetic procedures (UV, peels, surgery, etc.)
- complex correction of hyperpigmentation
- moisturizing (including lips)
- atrophic scars (post-acne) complex treatment

Application protocol:

3-6 sessions, 1 session per 2 weeks

Packaging:

pre-filled syringe of 1,3 or 2,0 ml

Concentration of HA:

18 mg/ml (1,8%)

Molecular weight of HA:

1800 kDa

Antioxidants

Buffer system

MESOHYDRAL

This product is perfect for biorevitalization and bioreinforcement of young skin because it overcomes deficiency of hyaluronic acid in the skin. It smooths wrinkles, provides long-term effect of hydration and improvement of skin turgor.

Indications:

- biorevitalization
- bioreinforcement
- photo- and chronoaging of skin
- dehydrated seborrheic / sebostatic skin
- preparation for and rehabilitation after invasive treatment
- skin recovery following active sun exposure
- aging prevention

Application protocol:

2-4 sessions at 14 day intervals

Packaging:

pre-filled syringe of 1,3 ml

CLINICAL TRIALS

The research of anti-aging and whitening properties of medical devices "NucleoSpire" in the correction of involutional skin changes of face, neck and hands.

Laboratories "SkinLab" Moscow, Russia

12 women aged 40-65 years were involved in the research

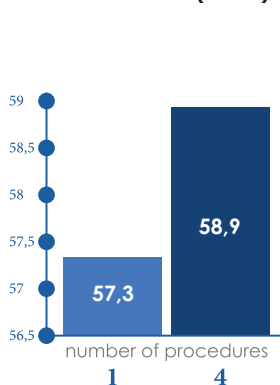

Protocol of application: 6 injections

(Alteration of devices with HA & DNA-RNA), 1 injection per 2 weeks

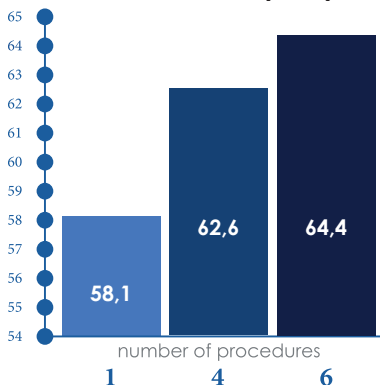

Duration of the study: 4 months

The results:

SKIN ELASTICITY LEVEL HAS INCREASED (NECK)

SKIN HYDRATION LEVEL HAS INCREASED (FACE)
